5 Analyzing Linear Equations

What You'll Learn

- **Lesson 5-1** Find the slope of a line.
- **Lesson 5-2** Write direct variation equations.
- **Lessons 5-3 through 5-5** Write linear equations in slope-intercept and point-slope forms.
- **Lesson 5-6** Write equations for parallel and perpendicular lines.
- **Lesson 5-7** Draw a scatter plot and write the equations of a line of fit.

Why It's Important

Key Vocabulary

- **slope** (p. 256)
- rate of change (p. 258)
- direct variation (p. 264)
- slope-intercept form (p. 272)
- point-slope form (p. 286)

Linear equations are used to model a variety of real-world situations. The concept of slope allows you to analyze how a quantity changes over time.

You can use a linear equation to model the cost of the space program. The United States began its exploration of space in January, 1958, when it launched its first satellite into orbit. In the 1970s, NASA developed the space shuttle to reduce costs by inventing the first reusable spacecraft. *You will use a linear equation to model the cost of the space program in Lesson 5-7.*

CONTENTS

Getting Started

Prerequisite Skills To be successful in this chapter, you'll need to master these skills and be able to apply them in problem-solving situations. Review these skills before beginning Chapter 5.

For Less	on 5-1	Simplify Fractions	
Simplify.	(For review, see pages 798 and 799.)		
1. $\frac{2}{10}$	2. $\frac{8}{12}$	3. $\frac{2}{-8}$	4. $\frac{-4}{8}$
5. $\frac{-5}{-15}$	6. $\frac{-7}{-28}$	7. $\frac{9}{3}$	8. $\frac{18}{12}$

For Lesson 5-2

Evaluate Expressions

Evaluate $\frac{a-b}{c-d}$ for each set of values. (For review, see Lesson 1-2.) **9.** a = 6, b = 5, c = 8, d = 4**11.** a = -2, b = 1, c = 4, d = 0**13.** a = -3, b = -3, c = 4, d = 7

10. a = 5, b = -1, c = 2, d = -1**12.** a = 8, b = -2, c = -1, d = 1**14.** $a = \frac{1}{2}, b = \frac{3}{2}, c = 7, d = 9$

For Lessons 5-3 through 5-7

Write the ordered pair for each point. (For review, see Lesson 4-1.) **16.** *K* **15.** *I*

Make this Foldable to help you organize information about writing linear equations. Begin with four sheets of grid paper.

Reading and Writing As you read and study the chapter, use each page to write notes and to graph examples for each lesson.

CONTENTS

5-1 Slope

Standards 1.02, 2.01, 3.02, 4.01

Vocabulary

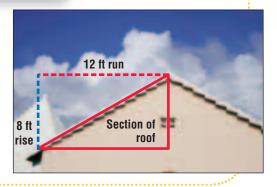

- slope
- rate of change

What You'll Learn

- Find the slope of a line.
- Use rate of change to solve problems.

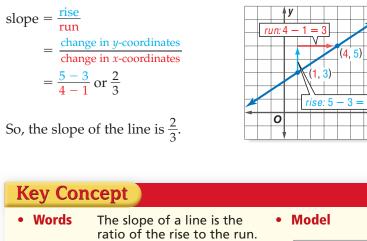

Why is slope important in architecture?

The slope of a roof describes how steep it is. It is the number of units the roof rises for each unit of run. In the photo, the roof rises 8 feet for each 12 feet of run. $slope = \frac{rise}{run}$ $= \frac{8}{12} \text{ or } \frac{2}{3}$

FIND SLOPE The **slope** of a line is a number determined by any two points on the line. This number describes how steep the line is. The greater the absolute value of the slope, the steeper the line. Slope is the ratio of the change in the *y*-coordinates (rise) to the change in the *x*-coordinates (run) as you move from one point to the other.

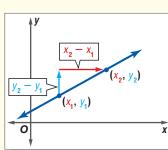

The graph shows a line that passes through (1, 3) and (4, 5).

• Symbols The slope m of a nonvertical line through any two points, (x_1, y_1) and (x_2, y_2) , can be found as follows.

```
m = \frac{y_2 - y_1}{x_2 - x_1} \quad \leftarrow \text{ change in } y\leftarrow \text{ change in } x
```

X

Slope of a Line

Study Tip

Reading Math In x_1 , the 1 is called a *subscript*. It is read *x sub 1*.

Find the slope of the line that passes through (-1, 2) and (3, 4).

Let $(-1, 2) = (x_1, y_1)$ and $(3, 4) = (x_2, y_2)$. $m = \frac{y_2 - y_1}{x_2 - x_1} \qquad \frac{\text{rise}}{\text{run}}$ $= \frac{4 - 2}{3 - (-1)} \qquad \text{Substitute.}$ $=\frac{2}{4}$ or $\frac{1}{2}$ Simplify. The slope is $\frac{1}{2}$.

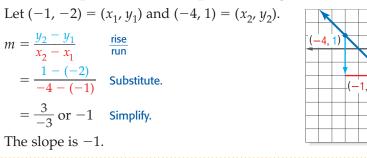

(3 4) (-1, 2)ο X

0

x

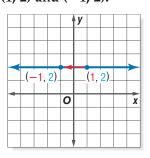

Example 2 Negative Slope

Find the slope of the line that passes through (-1, -2) and (-4, 1).

Example 3 Zero Slope

Find the slope of the line that passes through (1, 2) and (-1, 2). Let $(1, 2) = (x_1, y_1)$ and $(-1, 2) = (x_2, y_2)$. $m = \frac{y_2 - y_1}{x_2 - x_1} \quad \frac{\text{rise}}{\text{run}}$ $=\frac{2-2}{-1-1}$ Substitute. $=\frac{0}{-2}$ or 0 Simplify. The slope is zero.

Example 4 Undefined Slope

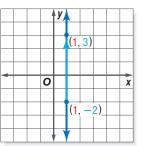

Find the slope of the line that passes through (1, -2) and (1, 3).

 (x_2, y_2) .

Let
$$(1, -2) = (x_1, y_1)$$
 and $(1, m) = \frac{y_2 - y_1}{x_2 - x_1}$ rise
= $\frac{3 - (-2)}{1 - 1}$ or 5

Since division by zero is undefined, the slope is undefined.

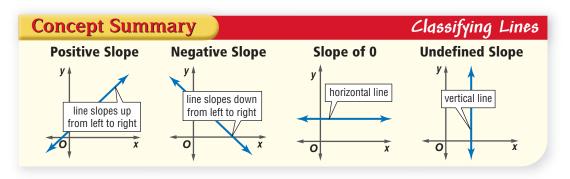

CONTENTS

Study Tip Common

Misconception It may make your calculations easier to choose the point on the left as (x_1, y_1) . However, either point may be chosen as (x_1, y_1) .

www.algebra1.com/extra_examples/nc

If you know the slope of a line and the coordinates of one of the points on a line, you can find the coordinates of other points on the line.

Example 5 Find Coordinates Given Slope

Find the value of *r* so that the line through (*r*, 6) and (10, -3) has a slope of $-\frac{3}{2}$. Let $(r, 6) = (x_1, y_1)$ and $(10, -3) = (x_2, y_2)$. $m = \frac{y_2 - y_1}{x_2 - x_1}$ Slope formula (r, 6) $-\frac{3}{2} = \frac{-3-6}{10-r}$ Substitute. $-\frac{3}{2} = \frac{-9}{10-r}$ Subtract. 0 x (10, -3)-3(10 - r) = 2(-9) Find the cross products. -30 + 3r = -18Simplify. -30 + 3r + 30 = -18 + 30 Add 30 to each side. 3r = 12Simplify. $\frac{3r}{3} = \frac{12}{3}$ Divide each side by 3. r = 4Simplify.

RATE OF CHANGE Slope can be used to describe a rate of change. The **rate of change** tells, on average, how a quantity is changing over time.

Example 6 Find a Rate of Change

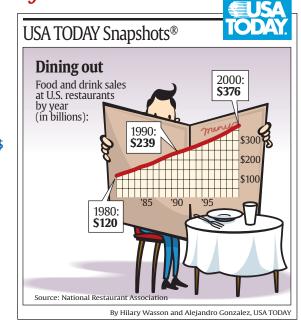

DINING OUT The graph shows the amount spent on food and drink at U.S. restaurants in recent years.

a. Find the rates of change for 1980–1990 and 1990–2000.

Use the formula for slope.

 $\frac{\text{rise}}{\text{run}} = \frac{\text{change in quantity}}{\text{change in time}} \xleftarrow{} \text{billion \$} \\ \xleftarrow{} \text{years}$

CONTENTS

Study Tip

Mathematical Words and Everyday Words

You may have noticed that many words used in mathematics are also used in everyday language. You can use the everyday meaning of these words to better understand their mathematical meaning. The table shows two mathematical words along with their everyday and mathematical meanings.

Word	Everyday Meaning	Mathematical Meaning
expression	 something that expresses or communicates in words, art, music, or movement 	one or more numbers or variables along with one or more arithmetic operations
	2. the manner in which one expresses oneself, especially in speaking, depicting, or performing	
function	 the action for which one is particularly fitted or employed an official ceremony or a formal social occasion 	a relationship in which the output depends upon the input
	3. something closely related to another thing and dependent on it for its existence, value, or significance	

Source: The American Heritage Dictionary of the English Language

Notice that the mathematical meaning is more specific, but related to the everyday meaning. For example, the mathematical meaning of *expression* is closely related to the first everyday definition. In mathematics, an expression communicates using symbols.

Reading to Learn

- **1.** How does the mathematical meaning of *function* compare to the everyday meaning?
- **2. RESEARCH** Use the Internet or other reference to find the everyday meaning of each word below. How might these words apply to mathematics? Make a table like the one above and note the mathematical meanings that you learn as you study Chapter 5.

a. slope

b. intercept

c. parallel

5-2 Slope and Direct Variation

What You'll Learn

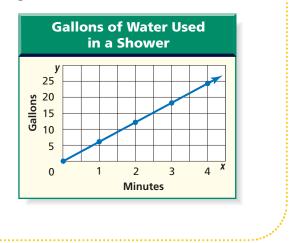

- Write and graph direct variation equations.
- Solve problems involving direct variation.

How is slope related to your shower?

A standard showerhead uses about 6 gallons of water per minute. If you graph the ordered pairs from the table, the slope of the line is 6.

<i>x</i> (minutes)	<i>y</i> (gallons)
0	0
1	6
2	12
3	18
4	24
	(minutes) 0 1 2

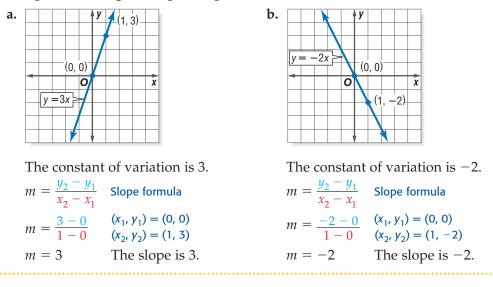

The equation is y = 6x. The number of gallons of water *y* depends *directly* on the amount of time in the shower *x*.

DIRECT VARIATION A direct variation is described by an equation of the form y = kx, where $k \neq 0$. We say that *y* varies directly with *x* or *y* varies directly as *x*. In the equation y = kx, *k* is the constant of variation.

Example 1 Slope and Constant of Variation

Name the constant of variation for each equation. Then find the slope of the line that passes through each pair of points.

Compare the constant of variation with the slope of the graph for each example. Notice that the slope of the graph of y = kx is k.

Standards 1.02, 1.03, 2.01, 3.02, 4.01

Vocabulary

- direct variation
- constant of variation
- family of graphs
- parent graph

The ordered pair (0, 0) is a solution of y = kx. Therefore, the graph of y = kx passes through the origin. You can use this information to graph direct variation equations.

Example	2 Direct Variation with $K > 0$		
Graph	y = 4x.		
Step 1	Write the slope as a ratio.		
	$4 = \frac{4}{1} \frac{\text{rise}}{\text{run}}$		
Step 2	Graph (0, 0).		
Step 3	From the point (0, 0), move up 4 units and right 1 unit. Draw a dot.	-	
Step 4	Draw a line containing the points.		

Example	3 Direct Variation with $K < 0$	
Graph	$y = -\frac{1}{3}x.$	
-	Write the slope as a ratio. $-\frac{1}{3} = \frac{-1}{3}$ $\frac{rise}{run}$ Graph (0, 0).	
-	From the point (0, 0), move down 1 unit and right 3 units. Draw a dot. Draw a line containing the points.	
		•••••

A **family of graphs** includes graphs and equations of graphs that have at least one characteristic in common. The **parent graph** is the simplest graph in a family.

Graphing Calculator Investigation

Family of Graphs

The calculator screen shows the graphs of y = x, y = 2x, and y = 4x.

Think and Discuss

- 1. Describe any similarities among the graphs.
- **2.** Describe any differences among the graphs.
- **3.** Write an equation whose graph has a steeper slope than y = 4x. Check your answer by graphing y = 4x and your equation.
- phs. phs. [-10, 10] scl: 1 by [-10, 10] scl: 1 unition

v = 4x

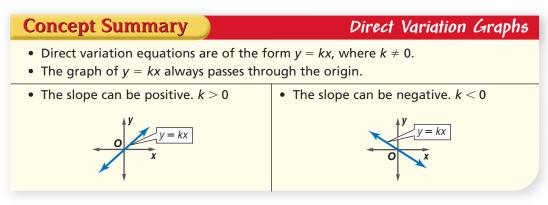

0

v = -

0

x

- **4.** Write an equation whose graph lies between the graphs of y = x and y = 2x. Check your answer by graphing the equations.
- **5.** Write a description of this family of graphs. What characteristics do the graphs have in common? How are they different?
- **6.** The equations whose graphs are in this family are all of the form y = mx. How does the graph change as the absolute value of *m* increases?

If you know that *y* varies directly as *x*, you can write a direct variation equation that relates the two quantities.

Example 4 Write and Solve a Direct Variation Equation

Suppose *y* varies directly as *x*, and y = 28 when x = 7.

a. Write a direct variation equation that relates *x* and *y*.

Find the value of *k*.

Direct variation formula 28 = k(7)Replace y with 28 and x with 7. $=\frac{k(7)}{2}$ Divide each side by 7. 4 = kSimplify. Therefore, y = 4x.

b. Use the direct variation equation to find x when y = 52.

y = 4x Direct variation equation 52 = 4x Replace y with 52. $\frac{52}{1} = \frac{4x}{1}$ Divide each side by 4. 13 = xSimplify. Therefore, x = 13 when y = 52.

SOLVE PROBLEMS One of the most common uses of direct variation is the formula for distance, d = rt. In the formula, distance d varies directly as time t, and the rate *r* is the constant of variation.

Example 5 Direct Variation Equation

• **BIOLOGY** A flock of snow geese migrated 375 miles in 7.5 hours.

a. Write a direct variation equation for the distance flown in any time.

Words The distance traveled is 375 miles, and the time is 7.5 hours.

Variables Let r = rate.

Distance equals time. times Equation 7.5 h 375 mi Х Solve for the rate. 375 = r(7.5) Original equation $\frac{375}{1} = \frac{r(7.5)}{1}$ Divide each side by 7.5. 50 = rSimplify. Therefore, the direct variation equation is d = 50t.

 $\mathbf{v} = k\mathbf{x}$

Biology •·····

Snow geese migrate more than 3000 miles from their

southwest United States to

their summer home in the

winter home in the

Canadian arctic.

Source: Audubon Society

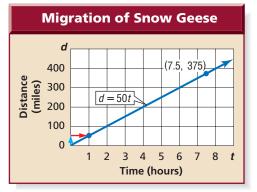

b. Graph the equation.

The graph of d = 50t passes through the origin with slope 50.

$$m = \frac{50}{1} \quad \frac{\text{rise}}{\text{run}}$$

- c. Estimate how many hours of flying time it would take the geese to migrate 3000 miles.
 - d = 50t**Original equation** 3000 = 50tReplace d with 3000. = 50t 3000 Divide each side by 50. 50 50 t = 60

Simplify.

- At this rate, it will take 60 hours of flying time to migrate 3000 miles.

Check for Understanding

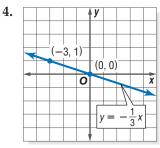

Concept Check **1. OPEN ENDED** Write a general equation for *y* varies directly as *x*.

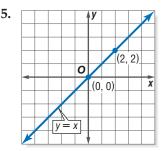

> 2. Choose the equations that represent direct variations. Then find the constant of variation for each direct variation.

a.
$$15 = rs$$
 b. $4a = b$ **c.** $z = \frac{1}{3}x$ **d.** $s = \frac{9}{4}$

3. Explain how the constant of variation and the slope are related in a direct variation equation.

Guided Practice Name the constant of variation for each equation. Then determine the slope of the line that passes through each pair of points.

Graph each equation.

6. y = 2x

7. y = -3x

8. $y = \frac{1}{2}x$

Write a direct variation equation that relates x and y. Assume that y varies directly as x. Then solve.

- **9.** If y = 27 when x = 6, find x when y = 45.
- **10.** If y = 10 when x = 9, find x when y = 9.

11. If y = -7 when x = -14, find y when x = 20.

CONTENTS

Application **JOBS** For Exercises 12–14, use the following information.

Suppose you work at a job where your pay varies directly as the number of hours you work. Your pay for 7.5 hours is \$45.

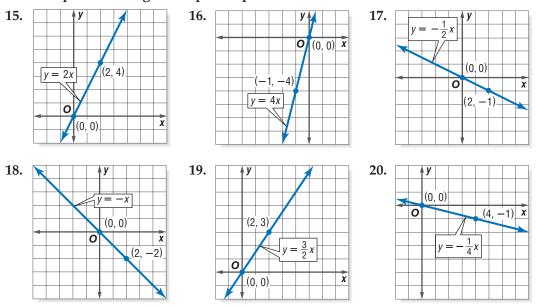

- 12. Write a direct variation equation relating your pay to the hours worked.
- **13.** Graph the equation.
- **14.** Find your pay if you work 30 hours.

- **37.** If y = 4 when x = 12, find *y* when x = -24.
- **38.** If y = 12 when x = 15, find x when y = 21.
- **39.** If y = 2.5 when x = 0.5, find y when x = 20.
- **40.** If y = -6.6 when x = 9.9, find y when x = 6.6.
- **41.** If $y = 2\frac{2}{3}$ when $x = \frac{1}{4}$, find y when $x = 1\frac{1}{8}$.
- **42.** If y = 6 when $x = \frac{2}{3}$, find x when y = 12.

Write a direct variation equation that relates the variables. Then graph the equation.

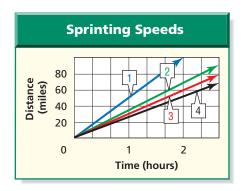

- **43. GEOMETRY** The circumference *C* of a circle is about 3.14 times the diameter *d*.
- **44. GEOMETRY** The perimeter *P* of a square is 4 times the length of a side *s*.
- **45. SEWING** The total cost is *C* for *n* yards of ribbon priced at \$0.99 per yard.
- **46. RETAIL** Kona coffee beans are \$14.49 per pound. The total cost of *p* pounds is *C*.

47. CRITICAL THINKING Suppose *y* varies directly as *x*. If the value of *x* is doubled, what happens to the value of *y*? Explain.

BIOLOGY Which line in the graph represents the sprinting speeds of each animal?

- 48. elephant, 25 mph
- **49.** reindeer, 32 mph
- 50. lion, 50 mph
- 51. grizzly bear, 30 mph

Career Choices

Veterinary •······ Medicine

Veterinarians compare the age of an animal to the age of a human on the basis of bone and tooth growth.

🖢 Online Research

For information about a career as a veterinarian, visit: www.algebra1.com/ careers

SPACE For Exercises 52 and 53, use the following information.

The weight of an object on the moon varies directly with its weight on Earth. With all of his equipment, astronaut Neil Armstrong weighed 360 pounds on Earth, but weighed only 60 pounds on the moon.

- 52. Write an equation that relates weight on the moon *m* with weight on Earth *e*.
- 53. Suppose you weigh 138 pounds on Earth. What would you weigh on the moon?
- ANIMALS For Exercises 54 and 55, use the following information. Most animals age more rapidly than humans do. The chart shows

equivalent ages for horses and humans.

- **54.** Write an equation that relates human age to horse age.
- 55. Find the equivalent horse age for a human who is 16 years old.
- **56.** WRITING IN MATH Answer the question that was posed at the beginning of the lesson.

How is slope related to your shower?

Include the following in your answer:

- an equation that relates the number of gallons *y* to the time spent in the shower *x* for a low-flow showerhead that uses only 2.5 gallons of water per minute, and
- a comparison of the steepness of the graph of this equation to the graph at the top of page 264.

57. Which equation best describes the graph at the right?

(A) $y = 2x$	B y = -2x
$\bigcirc y = \frac{1}{2}x$	(D) $y = -\frac{1}{2}x$

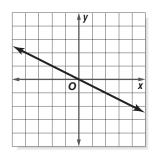

58. Which equation does *not* model a direct variation?

(A) $y = 4x$	(B) $y = 22x$
$\bigcirc y = 3x + 1$	(D) $y = \frac{1}{2}x$

CONTENTS

FAMILIES OF GRAPHS For Exercises 59–62, use the graphs of y = -1x, y = -2x, and y = -4x, which form a family of graphs.

- **59.** Graph y = -1x, y = -2x, and y = -4x on the same screen.
- **60.** How are these graphs similar to the graphs in the Graphing Calculator Investigation on page 265? How are they different?

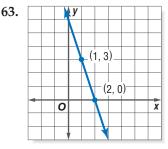

Lesson 5-2 Slope and Direct Variation 269

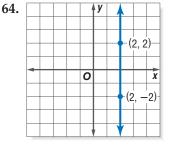

Horse age <i>(x)</i>	0	1	2	3	4	5)
Human age <i>(y)</i>	0	3	6	9	12	15]

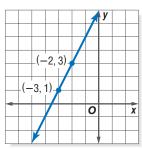

- **61.** Write an equation whose graph has a steeper slope than y = -4x.
- **62. MAKE A CONJECTURE** Explain how you can tell without graphing which of two direct variation equations has the graph with a steeper slope.

Standards 1.03, 3.02, 4.01

Investigating Slope-Intercept Form

Collect the Data

- Cut a small hole in a top corner of a plastic sandwich bag. Loop a long rubber band through the hole.
- Tape the free end of the rubber band to the desktop.
- Use a centimeter ruler to measure the distance from the desktop to the end of the bag. Record this distance for 0 washers in the bag using a table like the one below.

Number of Washers x	Distance y
0	
)) 1	

- Place one washer in the plastic bag. Then measure and record the new distance from the desktop to the end of the bag.
- Repeat the experiment, adding different numbers of washers to the bag. Each time, record the number of washers and the distance from the desktop to the end of the bag.

Analyze the Data

- 1. The domain contains values represented by the independent variable, washers. The range contains values represented by the dependent variable, distance. On grid paper, graph the ordered pairs (washers, distance).
- 2. Write a sentence that describes the points on the graph.
- **3.** Describe the point that represents the trial with no washers in the bag.
- **4.** The rate of change can be found by using the formula for slope.
 - rise _ change in distance
 - run change in number of washers

Find the rate of change in the distance from the desktop to the end of the bag as more washers are added.

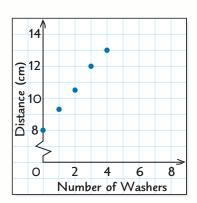

CONTENTS

5. Explain how the rate of change is shown on the graph.

Make a Conjecture

The graph shows sample data from a rubber band experiment. Draw a graph for each situation.

- **6.** A bag that hangs 10.5 centimeters from the desktop when empty and lengthens at the rate of the sample.
- **7.** A bag that has the same length when empty as the sample and lengthens at a faster rate.
- **8.** A bag that has the same length when empty as the sample and lengthens at a slower rate.

Slope-Intercept Form

What You'll Learn

Standards 1.02, 2.01, 3.02, 4.01

Vocabulary

Study Tip

Look Back To review intercepts, see Lesson 4-5.

slope-intercept form

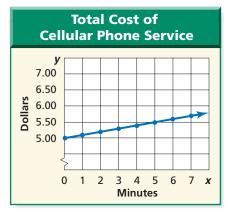

Write and graph linear equations in slope-intercept form.

• Model real-world data with an equation in slope-intercept form.

How is a *y*-intercept related to a flat fee?

A cellular phone service provider charges \$0.10 per minute plus a flat fee of \$5.00 each month.

<i>x</i> (minutes)	<i>y</i> (dollars)
0	5.00
1	5.10
2	5.20
3	5.30
4	5.40
5	5.50
6	5.60
7	5.70
6	5.60

The slope of the line is 0.1. It crosses the *y*-axis at (0, 5). The equation of the line is y = 0.1x + 5.

charge per minute, \$0.10 -

flat fee, \$5.00

SLOPE-INTERCEPT FORM An equation of the form y = mx + b is in **slope-intercept form**. When an equation is written in this form, you can identify the slope and *y*-intercept of its graph.

Key Con	cept		Slope-Intercept Forn
• Words	The linear equation y = mx + b is written in slope-intercept form, where m is the slope and b is the y-intercept.	• Model	(0, b) $y = mx + b$
• Symbols	$y = mx + b$ $lope \perp \qquad \qquad \downarrow \qquad \qquad \downarrow \qquad y-intercept$		

Example 🚺 Write an Equation Given Slope and y-Intercept

Write an equation of the line whose slope is 3 and whose *y*-intercept is 5.

y = mx + b Slope-intercept form

y = 3x + 5 Replace *m* with 3 and *b* with 5.

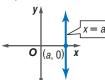

Example 2 Write an Equation Given Two Points

Write an equation of the line shown in the graph.

Study Tip

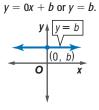

Vertical Lines

The equation of a vertical line *cannot* be written in slope-intercept form. *Why?*

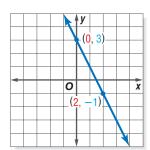

Horizontal Lines

The equation of a horizontal line *can* be written in slope-intercept form as

Step 1 You know the coordinates of two points on the line. Find the slope. Let $(x_1, y_1) = (0, 3)$ and $(x_2, y_2) = (2, -1)$. $m = \frac{y_2 - y_1}{x_2 - x_1} \qquad \frac{\text{rise}}{\text{run}}$ $m = \frac{-1 - 3}{2 - 0} \qquad \begin{array}{l} x_1 = 0, x_2 = 2 \\ y_1 = 3, y_2 = -1 \end{array}$ $m = \frac{-4}{2} \text{ or } -2 \qquad \text{Simplify.}$

The slope is -2.

Step 2 The line crosses the *y*-axis at (0, 3). So, the *y*-intercept is 3.

Step 3 Finally, write the equation.

y = mx + b Slope-intercept form y = -2x + 3 Replace *m* with -2 and *b* with 3.

The equation of the line is y = -2x + 3.

One advantage of the slope-intercept form is that it allows you to graph an equation quickly.

Example	B Graph an Equation in Slope-Int B Graph an Equation in Slope-Int	ercept Form
Graph	$y = -\frac{2}{3}x + 1.$	
Step 1	The <i>y</i> -intercept is 1. So, graph $(0, 1)$.	$y = -\frac{2}{3}x + 1$
Step 2	The slope is $-\frac{2}{3}$ or $\frac{-2}{3}$. rise run	
	From (0, 1), move down 2 units and right 3 units. Draw a dot.	
Step 3	Draw a line connecting the points.	

Example 4 Graph an Equation in Standard Form

Graph 5x - 3y = 6.

Step 1 Solve for *y* to find the slope-intercept form.

CONTENTS

$$5x - 3y = 6$$
Original equation
$$5x - 3y - 5x = 6 - 5x$$
Subtract 5x from each side.
$$-3y = 6 - 5x$$
Simplify.
$$-3y = -5x + 6$$

$$6 - 5x = 6 + (-5x) \text{ or } -5x + 6$$

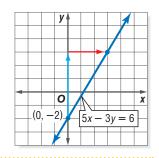

$$\frac{-3y}{-3} = \frac{-5x + 6}{-3}$$
Divide each side by -3.
$$\frac{-3y}{-3} = \frac{-5x}{-3} + \frac{6}{-3}$$
Divide each term in the numerator by -3.
$$y = \frac{5}{3}x - 2$$
Simplify.

(continued on the next page)

Lesson 5-3 Slope-Intercept Form 273

Step 2 The *y*-intercept of $y = \frac{5}{3}x - 2$ is -2. So, graph (0, -2).

Step 3 The slope is $\frac{5}{3}$. From (0, -2), move up 5 units and right 3 units. Draw a dot.

Step 4 Draw a line containing the points.

MODEL REAL-WORLD DATA If a quantity changes at a constant rate over time, it can be modeled by a linear equation. The *y*-intercept represents a starting point, and the slope represents the rate of change.

Example 5 Write an Equation in Slope-Intercept Form

- ••• AGRICULTURE The natural sweeteners used in foods include sugar, corn sweeteners, syrup, and honey. Use the information at the left about natural sweeteners.
 - a. The amount of natural sweeteners consumed has increased by an average of 2.6 pounds per year. Write a linear equation to find the average consumption of natural sweeteners in any year after 1989.
 - **Words** The consumption increased 2.6 pounds per year, so the rate of change is 2.6 pounds per year. In the first year, the average consumption was 133 pounds.

Variables Let C = average consumption. Let n = number of years after 1989.

Equation

Average		rate of		number of years		amount
consumption	equals	change	times	after 1989	plus	at start.
č	=	2.6		n	+	133

b. Graph the equation.

The graph passes through (0, 133) with slope 2.6.

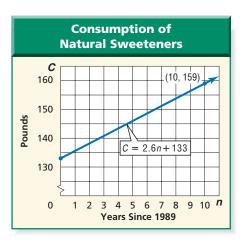

c. Find the number of pounds of natural sweeteners consumed by each person in 1999.

The year 1999 is 10 years after 1989. So, *n* = 10.

 C = 2.6n + 133 Consumption equation

 C = 2.6(10) + 133 Replace *n* with 10.

 C = 159 Simplify.

So, the average person consumed 159 pounds of natural sweeteners in 1999.

CHECK Notice that (10, 159) lies on the graph.

Agriculture •······

In 1989, each person in the United States consumed an average of 133 pounds of natural sweeteners. Source: USDA Agricultural Outlook

Check for Understanding

Concept Check **1. OPEN ENDED** Write an equation for a line with a slope of 7.

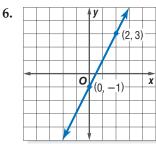

- **2. Explain** why equations of vertical lines cannot be written in slope-intercept form, but equations of horizontal lines can.
- 3. Tell which part of the slope-intercept form represents the rate of change.

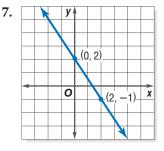

Guided Practice Write an equation of the line with the given slope and *y*-intercept.

4. slope: -3, *y*-intercept: 1

5. slope: 4, y-intercept: -2

Write an equation of the line shown in each graph.

Graph each equation.

8. y = 2x - 3 9. y = -3x + 1 10. 2x + y = 5

Application

MONEY For Exercises 11–13, use the following information.

Suppose you have already saved \$50 toward the cost of a new television set. You plan to save \$5 more each week for the next several weeks.

- **11.** Write an equation for the total amount *T* you will have *w* weeks from now.
- **12.** Graph the equation.
- 13. Find the total amount saved after 7 weeks.

37. $-2y = 6x - 4$	38. $2x + 3y = 6$	39. $4x - 3y = 3$

Write a linear equation in slope-intercept form to model each situation.

- 40. You rent a bicycle for \$20 plus \$2 per hour.
- 41. An auto repair shop charges \$50 plus \$25 per hour.
- **42.** A candle is 6 inches tall and burns at a rate of $\frac{1}{2}$ inch per hour.
- **43.** The temperature is 15° and is expected to fall 2° each hour during the night.
- **44. CRITICAL THINKING** The equations y = 2x + 3, y = 4x + 3, y = -x + 3, and y = -10x + 3 form a family of graphs. What characteristic do their graphs have in common?

SALES For Exercises 45 and 46, use the following information and the graph at the right.

In 1991, book sales in the United States totaled \$16 billion. Sales increased by about \$1 billion each year until 1999.

- **45.** Write an equation to find the total sales *S* for any year *t* between 1991 and 1999.
- **46.** If the trend continues, what will sales be in 2005?

Source: Association of American Publishers

TRAFFIC For Exercises 47–49, use the following information.

In 1966, the traffic fatality rate in the United States was 5.5 fatalities per 100 million vehicle miles traveled. Between 1966 and 1999, the rate decreased by about 0.12 each year.

- **47.** Write an equation to find the fatality rate *R* for any year *t* between 1966 and 1999.
- **48.** Graph the equation.
- 49. Find the fatality rate in 1999.

50. WRITING IN MATH

Answer the question that was posed at the beginning of the lesson.

How is a *y*-intercept related to a flat fee?

Include the following in your answer:

- the point at which the graph would cross the *y*-axis if your cellular phone service provider charges a rate of \$0.07 per minute plus a flat fee of \$5.99,
- and a description of a situation in which the *y*-intercept of its graph is \$25.

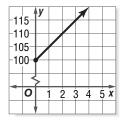

51. Which equation does not have a y-intercept of 5?

(A) $2x = y - 5$	B $3x + y = 5$
(C) $y = x + 5$	D $2x - y = 5$

- 52. Which situation below is modeled by the graph?
 - A You have \$100 and plan to spend \$5 each week.
 - **B** You have \$100 and plan to save \$5 each week.
 - C You need \$100 for a new CD player and plan to save \$5 each week.

- Extending **53.** The standard form of a linear equation is Ax + By = C, where A, B, and C are integers, $A \ge 0$, and A and B are not both zero. Solve Ax + By = C for y. Your the Lesson answer is written in slope-intercept form.
 - 54. Use the slope-intercept equation in Exercise 53 to write expressions for the slope and *y*-intercept in terms of *A*, *B*, and *C*.
 - 55. Use the expressions in Exercise 54 to find the slope and *y*-intercept of each equation.

Graphing Calculator A Follow-Up of Lesson 5-3

Standards

Families of Linear Graphs

A family of people is a group of people related by birth, marriage, or adoption. Recall that a *family of graphs* includes graphs and equations of graphs that have at least one characteristic in common.

Families of linear graphs fall into two categories—those with the same slope and those with the same *y*-intercept. A graphing calculator is a useful tool for studying a group of graphs to determine whether they form a family.

Example 1

Graph y = x, y = x + 4, and y = x - 2 in the standard viewing window. Describe any similarities and differences among the graphs. Write a description of the family.

Enter the equations in the Y= list as Y1, Y2, and Y3. Then graph the equations.

KEYSTROKES: Review graphing on pages 224 and 225.

- The graph of *y* = *x* has a slope of 1 and a *y*-intercept of 0.
- The graph of y = x + 4 has a slope of 1 and a *y*-intercept of 4.
- The graph of y = x 2 has a slope of 1 and a *y*-intercept of -2.

Notice that the graph of y = x + 4 is the same as the graph of y = x, moved 4 units up. Also, the graph of y = x - 2 is the same as the graph of y = x, moved 2 units down. All graphs have the same slope and different intercepts.

Because they all have the same slope, this family of graphs can be described as linear graphs with a slope of 1.

y = x + 4 y = x - 2

[-10, 10] scl: 1 by [-10, 10] scl: 1

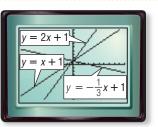

Example 2

Graph y = x + 1, y = 2x + 1, and $y = -\frac{1}{3}x + 1$ in the standard viewing window. Describe any similarities and differences among the graphs. Write a description of the family.

Enter the equations in the Y= list and graph.

• The graph of y = x + 1 has a slope of 1 and a *y*-intercept of 1.

www.algebra1.com/other_calculator_keystrokes

[-10, 10] scl: 1 by [-10, 10] scl: 1

Investigation

- The graph of y = 2x + 1 has a slope of 2 and a *y*-intercept of 1.
- The graph of $y = -\frac{1}{3}x + 1$ has a slope of $-\frac{1}{3}$ and a *y*-intercept of 1.

These graphs have the same intercept and different slopes. This family of graphs can be described as linear graphs with a *y*-intercept of 1.

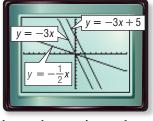

Sometimes a common characteristic is not enough to determine that a group of equations describes a family of graphs.

Example 3

Graph y = -3x, y = -3x + 5, and $y = -\frac{1}{2}x$ in the standard viewing window. Describe any similarities and differences among the graphs.

- The graph of y = -3x has slope -3 and *y*-intercept 0.
- The graph of y = -3x + 5 has slope -3 and *y*-intercept 5.
- The graph of $y = -\frac{1}{2}x$ has slope $-\frac{1}{2}$ and *y*-intercept 0.

These equations are similar in that they all have negative slope. However since the slopes are different and the *y*-intercepts are different, these graphs are not all in the same family.

[-10, 10] scl: 1 by [-10, 10] scl: 1

Exercises

Graph each set of equations on the same screen. Describe any similarities or differences among the graphs. If the graphs are part of the same family, describe the family.

1. $y = -4$	2. $y = -x + 1$	3. $y = x + 4$
y = 0	y = 2x + 1	y = 2x + 4
y = 7	$y = \frac{1}{4}x + 1$	y=2x-4
4. $y = \frac{1}{2}x + 2$	5. $y = -2x - 2$	6. $y = 3x$
$y = \frac{1}{3}x + 3$	$y = 2x - 2$ $y = \frac{1}{2}x - 2$	y = 3x + 6 $y = 3x - 7$
$y = \frac{1}{4}x + 4$	ν Ζ	

- **7. MAKE A CONJECTURE** Write a paragraph explaining how the values of *m* and *b* in the slope-intercept form affect the graph of the equation.
- **8.** Families of graphs are also called **classes of functions**. Describe the similarities and differences in the class of functions f(x) = x + c, where *c* is any real number.
- **9.** Graph y = |x|. Make a conjecture about the transformations of the parent graph, y = |x| + c and, y = |x + c|. Use a graphing calculator with different values of *c* to test your conjecture.

linear extrapolation

Comparison of the set of the set

In 1995, the population of Orlando, Florida, was about 175,000. At that time, the population was growing at a rate of about 2000 per year.

x (year)	<i>y</i> (population)
:	:
1994	173,000
1995	175,000
1996	177,000
:	:

If you could write an equation based on the slope, 2000, and the point (1995, 175,000), you could predict the population for another year.

WRITE AN EQUATION GIVEN THE SLOPE AND ONE POINT You

have learned how to write an equation of a line when you know the slope and a specific point, the *y*-intercept. The following example shows how to write an equation when you know the slope and any point on the line.

Example 1 Write an Equation Given Slope and One Point

Write an equation of a line that passes through (1, 5) with slope 2.

- **Step 1** The line has slope 2. To find the *y*-intercept, replace *m* with 2 and (x, y) with (1, 5) in the slope-intercept form. Then, solve for *b*.
 - y = mx + b Slope-intercept form 5 = 2(1) + b Replace *m* with 2, *y* with 5, and *x* with 1. 5 = 2 + b Multiply. 5 - 2 = 2 + b - 2 Subtract 2 from each side. 3 = b Simplify.
- **Step 2** Write the slope-intercept form using m = 2 and b = 3.
 - y = mx + b Slope-intercept form

y = 2x + 3 Replace *m* with 2 and *b* with 3.

Therefore, the equation is y = 2x + 3.

CHECK You can check your result by graphing $y = 2x + 3$ on a graphing calculator. Use the CALC menu to verify that it passes through (1, 5).
--

WRITE AN EQUATION GIVEN TWO POINTS Sometimes you do not know the slope of a line, but you know two points on the line. In this case, find the slope of the line. Then follow the steps in Example 1.

Example 2) Write an Equation Given Two Points

Multiple-Choice Test Item

The table of ordered pairs shows the coordinates of the two points on the graph of a function. Which equation describes the function? (A) $y = -\frac{1}{3}x - 2$ (B) y = 3x - 2(C) $y = -\frac{1}{3}x + 2$ (D) $y = \frac{1}{3}x - 2$

Read the Test Item

The table represents the ordered pairs (-3, -1) and (6, -4).

Solve the Test Item

Step 1 Find the slope of the line containing the points. Let $(x_1, y_1) = (-3, -1)$ and $(x_2, y_2) = (6, -4)$.

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$
 Slope formula

$$m = \frac{-4 - (-1)}{6 - (-3)} \quad x_1 = -3, x_2 = 6, y_1 = -1, y_2 = -4$$

$$m = \frac{-3}{9} \text{ or } -\frac{1}{3} \quad \text{Simplify.}$$

Step 2 You know the slope and two points. Choose one point and find the *y*-intercept. In this case, we chose (6, -4).

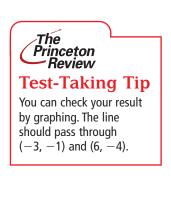

$$y = mx + b$$
Slope-intercept form
$$-4 = -\frac{1}{3}(6) + b$$
Replace *m* with $-\frac{1}{3}$, *x* with 6, and *y* with -4

$$-4 = -2 + b$$
Multiply.
$$-4 + 2 = -2 + b + 2$$
Add 2 to each side.
$$-2 = b$$
Simplify.
Write the slope-intercept form using $m = -\frac{1}{2}$ and $b = -2$.

Step 3 Write the slope-intercept form using $m = -\frac{1}{3}$ and y = mx + b Slope-intercept form

$$y = -\frac{1}{3}x - 2$$
 Replace *m* with $-\frac{1}{3}$ and *b* with -2 .

Therefore, the equation is $y = -\frac{1}{3}x - 2$. The answer is A.

Example 3 Write an Equation to Solve a Problem

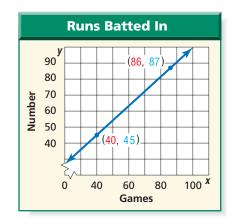

Baseball •-----

Mark McGwire is best known for breaking Roger Maris' single-season home run record of 61. In the 1998 season, McGwire hit 70 home runs.

Source: USA TODAY

• **BASEBALL** In the middle of the 1998 baseball season, Mark McGwire seemed to be on track to break the record for most runs batted in. After 40 games, McGwire had 45 runs batted in. After 86 games, he had 87 runs batted in. Write a linear equation to estimate the number of runs batted in for any number of games that season.

- **Explore** You know the number of runs batted in after 40 and 86 games.
- **Plan** Let *x* represent the number of games. Let *y* represent the number of runs batted in. Write an equation of the line that passes through (40, 45) and (86, 87).

Solve	Find the slope.	
	$m = \frac{y_2 - y_1}{x_2 - x_1}$	Slope formula
	$m = \frac{87 - 45}{86 - 40}$	Let $(x_1, y_1) = (40, 45)$ and $(x_2, y_2) = (86, 87)$.
	$m = \frac{42}{46}$ or about 0.91	Simplify.

Choose (40, 45) and find the *y*-intercept of the line.

y = mx + b	Slope-intercept form
45 = 0.91(40) + b	Replace m with 0.91, x with 40, and y with 45.
45 = 36.4 + b	Multiply.
45 - 36.4 = 36.4 + b - 36.4	Subtract 36.4 from each side.
8.6 = b	Simplify.

Write the slope-intercept form using m = 0.91, and b = 8.6.

y = mx + b	Slope-intercept form
y = 0.91x + 8.6	Replace m with 0.91 and b with 8.6.

Therefore, the equation is y = 0.91x + 8.6.

Examine Check your result by substituting the coordinates of the point not chosen, (86, 87), into the equation.

y = 0.91x + 8.6	Original equation
87 = 0.91(86) + 8.6	Replace y with 87 and x with 86.
87 ≟ 78.26 + 8.6	Multiply.
87 ≈ 86.86 √	The slope was rounded, so the answers vary slightly.

Conce	ept Summary		Writing Equations
Given t	he Slope and One Point	Given T	wo Points
Step 1	Substitute the values of <i>m</i> , <i>x</i> ,	Step 1	Find the slope.
and <i>y</i> into the slope-intercept form and solve for <i>b</i> .	Step 2	Choose one of the two points to use.	
Step 2	Write the slope-intercept form using the values of <i>m</i> and <i>b</i> .	Step 3	Then, follow the steps for writing an equation given the slope and one point.

When you use a linear equation to predict values that are beyond the range of the data, you are using **linear extrapolation**.

Example 4 Linear Extrapolation

SPORTS The record for most runs batted in during a single season is 190. Use the equation in Example 3 to decide whether a baseball fan following the 1998 season would have expected McGwire to break the record in the 162 games played that year.

y = 0.91 x + 8.6	Original equation
y = 0.91(162) + 8.6	Replace x with 162.
$y \approx 156$	Simplify.

Since the record is 190 runs batted in, a fan would have predicted that Mark McGwire would not break the record.

Be cautious when making a prediction using just two given points. The model may be *approximately* correct, but still give inaccurate predictions. For example, in 1998, Mark McGwire had 147 runs batted in, which was nine less than the prediction.

Lesson 5-4 Writing Equations in Slope-Intercept Form 285

5-5 Writing Equations in Point-Slope Form

What You'll Learn

- Write the equation of a line in point-slope form.
- Write linear equations in different forms.

Vocabulary

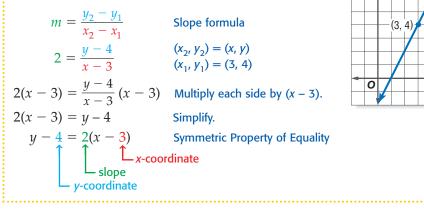

Standards

1.02, 2.01, 4.01

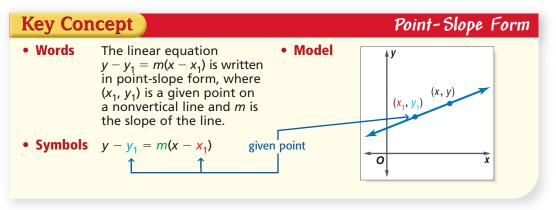

point-slope form

HOW can you use the slope formula to write an equation of a line?

The graph shows a line with slope 2 that passes through (3, 4). Another point on the line is (x, y).

POINT-SLOPE FORM The equation above was generated using the coordinates of a known point and the slope of the line. It is written in **point-slope form**.

ex

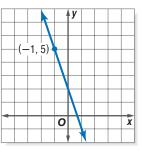

Example 🚺 Write an Equation Given Slope and a Point

Write the point-slope form of an equation for a line that passes through (-1, 5) with slope -3. $y - y_1 = m(x - x_1)$ Point-slope form

y - 5 = -3[x - (-1)] $(x_1, y_1) = (-1, 5)$

y - 5 = -3(x + 1) Simplify.

Therefore, the equation is y - 5 = -3(x + 1).

(x, y)

x

Study Tip Point-Slope Form

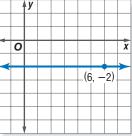

Remember, (x_1, y_1) represents the *given* point, and (x, y) represents *any other* point on the line.

Vertical lines cannot be written in point-slope form because the slope is undefined. However, since the slope of a horizontal line is 0, horizontal lines can be written in point-slope form.

Example 2 Write an Equation of a Horizontal Line Write the point-slope form of an equation for a horizontal line that passes through (6, -2). $y - y_1 = m(x - x_1)$ Point-slope form y - (-2) = 0(x - 6) $(x_1, y_1) = (6, -2)$ y + 2 = 0 Simplify.

Therefore, the equation is y + 2 = 0.

FORMS OF LINEAR EQUATIONS

You have learned about three of the most

common forms of linear equations.

Concept Summary		Forms of Linear Equations
Form	Equation	Description
Slope-Intercept	y = mx + b	m is the slope, and b is the y -intercept.
Point-Slope	$y - y_1 = m(x - x_1)$	m is the slope and (x_1, y_1) is a given point.
Standard	Ax + By = C	A and B are not both zero. Usually A is nonnegative and A, B, and C are integers whose greatest common factor is 1.

Study Tip

Look Back To review standard form, see Lesson 4-5.

Linear equations in point-slope form can be written in slope-intercept or standard form.

Example 3 Write an Equation in Standard Form

Write $y + 5 = -\frac{5}{4}(x - 2)$ in standard form.

In standard form, the variables are on the left side of the equation. *A*, *B*, and *C* are all integers.

$y + 5 = -\frac{5}{4}(x - 2)$	Original equation
$4(y+5) = 4\left(-\frac{5}{4}\right)(x-2)$	Multiply each side by 4 to eliminate the fraction.
4y + 20 = -5(x - 2)	Distributive Property
4y + 20 = -5x + 10	Distributive Property
4y + 20 - 20 = -5x + 10 - 20	Subtract 20 from each side.
4y = -5x - 10	Simplify.
4y + 5x = -5x - 10 + 5x	Add 5x to each side.
5x + 4y = -10	Simplify.
The standard form of the equation is $5x + 4y = -10$.	

www.algebra1.com/extra_examples/nc

Example 4 Write an Equation in Slope-Intercept Form

Write $y - 2 = \frac{1}{2}(x + 5)$ in slope-intercept form.

In slope-intercept form, *y* is on the left side of the equation. The constant and *x* are on the right side.

 $y - 2 = \frac{1}{2}(x + 5)$ Original equation $y - 2 = \frac{1}{2}x + \frac{5}{2}$ Distributive Property $y - 2 + 2 = \frac{1}{2}x + \frac{5}{2} + 2$ Add 2 to each side. $y = \frac{1}{2}x + \frac{9}{2}$ $2 = \frac{4}{2}$ and $\frac{4}{2} + \frac{5}{2} = \frac{9}{2}$ The slope-intercept form of the equation is $y = \frac{1}{2}x + \frac{9}{2}$.

You can draw geometric figures on a coordinate plane and use the point-slope form to write equations of the lines.

Example 5 Write an Equation in Point-Slope Form

GEOMETRY The figure shows right triangle *ABC*.

a. Write the point-slope form of the line containing the hypotenuse \overline{AB} .

Step 1 First, find the slope of *AB*.

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$
 Slope formula
= $\frac{4 - 1}{6 - 2}$ or $\frac{3}{4}$ (x₁, y₁) = (2, 1), (x₂, y₂) = (6, 4)

Method 1 Use (6, 4).

4). **Method 2** Use (2, 1).

 $y - y_1 = m(x - x_1) \qquad y - y_1 = m(x - x_1)$ $y - 4 = \frac{3}{4}(x - 6) \qquad y - 1 = \frac{3}{4}(x - 2)$

A (6, 4) B (6, 1) B (2, 1) C (2, 1) C X

b. Write each equation in standard form.

$y-4=\frac{3}{4}(x-6)$	Original equation	$y-1=\frac{3}{4}(x-2)$
$4(y-4) = 4(\frac{3}{4})(x-6)$	Multiply each side by 4.	$4(y-1) = 4\left(\frac{3}{4}\right)(x-2)$
4y - 16 = 3(x - 6)	Multiply.	4y - 4 = 3(x - 2)
4y - 16 = 3x - 18	Distributive Property	4y - 4 = 3x - 6
4y = 3x - 2	Add to each side.	4y=3x-2
-3x + 4y = -2	Subtract 3x from each side.	-3x + 4y = -2
3x - 4y = 2	Multiply each side by -1.	3x - 4y = 2

Regardless of which point was used to find the point-slope form, the standard form results in the same equation.

Study Tip

Geometry The hypotenuse is the side of a right triangle opposite the right angle.

Lesson 5-5 Writing Equations in Point-Slope Form 291

5-6

Geometry: Parallel and Perpendicular Lines

What You'll Learn

Standards 1.02, 2.01, 4.01

Vocabulary

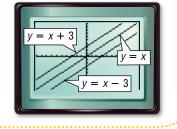

- parallel lines
- perpendicular lines

• Write an equation of the line that passes through a given point, parallel to a given line.

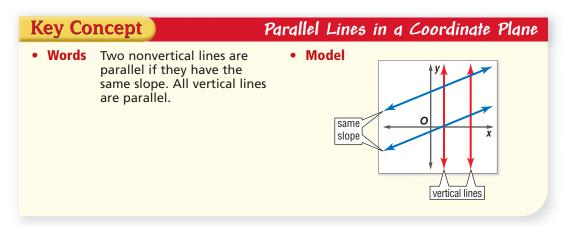

• Write an equation of the line that passes through a given point, perpendicular to a given line.

How can you determine whether two lines are parallel?

The graphing calculator screen shows a family of linear graphs whose slope is 1. Notice that the lines do not appear to intersect.

PARALLEL LINES Lines in the same plane that do not intersect are called **parallel lines**. Parallel lines have the same slope.

You can write the equation of a line parallel to a given line if you know a point on the line and an equation of the given line.

Example 1) Parallel Line Through a Given Point

Write the slope-intercept form of an equation for the line that passes through (-1, -2) and is parallel to the graph of y = -3x - 2.

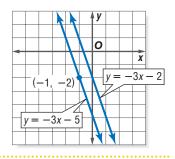

The line parallel to y = -3x - 2 has the same slope, -3. Replace *m* with -3, and (x_1, y_1) with (-1, -2) in the point-slope form.

 $y - y_1 = m(x - x_1)$ Point-slope form y - (-2) = -3[x - (-1)]Replace *m* with -3, *y* with -2, and *x* with -1. y + 2 = -3(x + 1)Simplify. y + 2 = -3x - 3Distributive Property y + 2 - 2 = -3x - 3 - 2Subtract 2 from each side. y = -3x - 5Write the equation in slope-intercept form.

Therefore, the equation is y = -3x - 5.

CHECK You can check your result by graphing both equations. The lines appear to be parallel. The graph of y = -3x - 5 passes through (-1, -2).

PERPENDICULAR LINES Lines that intersect at right angles are called **perpendicular lines**. There is a relationship between the slopes of perpendicular lines.

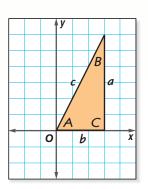

Algebra Activity

Perpendicular Lines

Model

- A scalene triangle is one in which no two sides are equal. Cut out a scalene right triangle ABC so that ∠C is a right angle. Label the vertices and the sides as shown.
- Draw a coordinate plane on grid paper. Place ∆ABC on the coordinate plane so that A is at the origin and side b lies along the positive x-axis.

CONTENTS

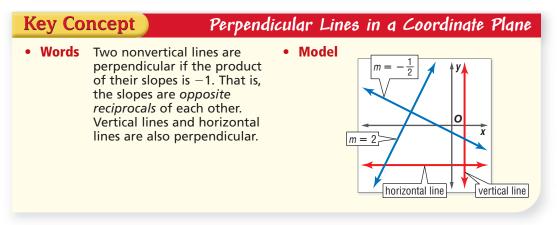

Analyze

- 1. Name the coordinates of *B*.
- **2.** What is the slope of side *c*?
- **3.** Rotate the triangle 90° counterclockwise so that *A* is still at the origin and side *b* is along the positive *y*-axis. Name the coordinates of *B*.
- 4. What is the slope of side c?
- 5. Repeat the activity for two other different scalene triangles.
- **6.** For each triangle and its rotation, what is the relationship between the first position of side *c* and the second?
- **7.** For each triangle and its rotation, describe the relationship between the coordinates of *B* in the first and second positions.
- **8.** Describe the relationship between the slopes of *c* in each position.

Make a Conjecture

9. Describe the relationship between the slopes of any two perpendicular lines.

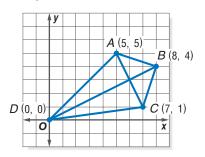

www.algebra1.com/extra_examples/nc

Example 2) Determine Whether Lines are Perpendicular

• **KITES** The outline of a kite is shown o<u>n</u> a coordinate plane. Determine whether *AC* is perpendicular to *BD*.

Find the slope of each segment.

Slope of \overline{AC} : $m = \frac{5-1}{5-7}$ or -2Slope of \overline{BD} : $m = \frac{4-0}{8-0}$ or $\frac{1}{2}$

The line segments are perpendicular because $\frac{1}{2}(-2) = -1$.

You can write the equation of a line perpendicular to a given line if you know a point on the line and the equation of the given line.

Example 3) Perpendicular Line Through a Given Point

Write the slope-intercept form for an equation of a line that passes through (-3, -2) and is perpendicular to the graph of x + 4y = 12.

Step 1 Find the slope of the given line.

Original equation
Subtract 1x from each side.
Simplify.
Divide each side by 4.
Simplify.

Step 2 The slope of the given line is $-\frac{1}{4}$. So, the slope of the line perpendicular to this line is the opposite reciprocal of $-\frac{1}{4}$, or 4.

Step 3 Use the point-slope form to find the equation.

 $y - y_1 = m(x - x_1)$ Point-slope form y - (-2) = 4[x - (-3)] (x₁, y₁) = (-3, -2) and m = 4 y + 2 = 4(x + 3) Simplify. y + 2 = 4x + 12 Distributive Property y + 2 - 2 = 4x + 12 - 2 Subtract 2 from each side. y = 4x + 10 Simplify.

Therefore, the equation of the line is y = 4x + 10.

CHECK You can check your result by graphing both equations on a graphing calculator. Use the CALC menu to verify that y = 4x + 10 passes through (-3, -2).

Study Tip

Graphing Calculator

The lines will not appear to be perpendicular on a graphing calculator if the scales on the axes are not set correctly. After graphing, press ZOOM 5 to set the axes for a correct representation.

Example **4** Perpendicular Line Through a Given Point

Write the slope-intercept form for an equation of a line perpendicular to the graph of $y = -\frac{1}{3}x + 2$ and passes through the *x*-intercept of that line.

- **Step 1** Find the slope of the perpendicular line. The slope of the given line is $-\frac{1}{3}$, therefore a perpendicular line has slope 3 because $-\frac{1}{3} \cdot 3 = -1$.
- **Step 2** Find the *x*-intercept of the given line.

Original equation
Replace y with 0.
Subtract 2 from each side.
Multiply each side by -3 .

The *x*-intercept is at (6, 0).

Step 3 Substitute the slope and the given point into the point-slope form of a linear equation. Then write the equation in slope-intercept form.

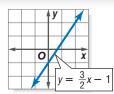

$y - y_1 = m(x - x_1)$	Point-slope form
y - 0 = 3(x - 6)	Replace x with 6, y with 0, and m with 3.
y = 3x - 18	Distributive Property

Check for Understanding

Concept Check 1. Explain how to find the slope of a line that is perpendicular to the line shown in the graph.

2. OPEN ENDED Give an example of two numbers that are negative reciprocals.

CONTENTS

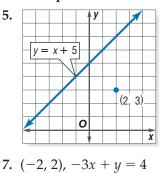

3. Define parallel lines and perpendicular lines.

Guided Practice

Write the slope-intercept form of an equation of the line that passes through the given point and is parallel to the graph of each equation.

4. yy = -2x + 4(0, -1)

6. (1, -3), y = 2x - 1

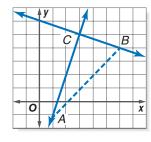

8. GEOMETRY Quadrilateral <u>ABCD</u> has vertices A(-2, 1), B(3, 3), C(5, 7), and D(0, 5). Determine whether <u>AC</u> is perpendicular to <u>BD</u>.

Write the slope-intercept form of an equation that passes through the given point and is perpendicular to the graph of each equation.

9.
$$(-3, 1), y = \frac{1}{3}x + 2$$

10. $(6, -2), y = \frac{3}{5}x - 4$
11. $(2, -2), 2x + y = 5$
Lesson 5-6 Geometry: Parallel and Perpendicular Lines 295

Application 12. **GEOMETRY** The line with equation y = 3x - 4contains side *AC* of right triangle *ABC*. If the vertex of the right angle *C* is at (3, 5), what is an equation of the line that contains side *BC*?

- **25. GEOMETRY** A *parallelogram* is a quadrilateral in which opposite sides are parallel. Is *ABCD* a parallelogram? Explain.
- **26.** Write an equation of the line parallel to the graph of y = 5x - 3 and through the origin.
- **27.** Write an equation of the line that has *y*-intercept -6 and is parallel to the graph of x - 3y = 8.

Write the slope-intercept form of an equation that passes through the given point and is perpendicular to the graph of each equation.

28. $(-2, 0), y = x - 6$	29. (1, 1), $y = 4x + 6$	30. $(-3, 1), y = -3x + 7$
31. (0, 5), $y = -8x + 4$	32. $(1, -3), y = \frac{1}{2}x + 4$	33. (4, 7), $y = \frac{2}{3}x - 1$
34. (0, 4), $3x + 8y = 4$	35. $(-2, 7), 2x - 5y = 3$	36. $(6, -1), 3y + x = 3$
37. $(0, -1), 5x - y = 3$	38. $(8, -2), 5x - 7 = 3y$	39. $(3, -3), 3x + 7 = 2x$

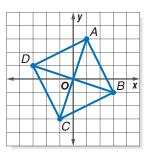

- **40.** Find an equation of the line that has a y-intercept of -2 and is perpendicular to the graph of 3x + 6y = 2.
- **41.** Write an equation of the line that is perpendicular to the line through (9, 10) and (3, -2) and passes through the *x*-intercept of that line.

Determine whether the graphs of each pair of equations are *parallel*, perpendicular, or neither.

42. $y = -2x + 11$	43. $3y = 2x + 14$
y + 2x = 23	2x - 3y = 2

- **45. GEOMETRY** The diagonals of a square are segments that connect the opposite vertices. Determine the relationship between the diagonals AC and BD of square ABCD.
- **46. CRITICAL THINKING** What is *a* if the lines with equations y = ax + 5 and 2y = (a + 4)x - 1 are parallel?

47. WRITING IN MATH

Answer the question that was posed at the beginning of the lesson.

How can you determine whether two lines are parallel?

Include the following in your answer:

- an equation whose graph is parallel to the graph of y = -5x, with an explanation of your reasoning, and
- an equation whose graph is perpendicular to the graph of y = -5x, with an explanation of your reasoning.
- NC Practice Standardized Test Practice
- **48.** What is the slope of a line perpendicular to the graph of 3x + 4y = 24?
 - (A) $-\frac{4}{3}$ (B) $-\frac{3}{4}$ (C) $\frac{3}{4}$ (D) $\frac{4}{3}$
- **49.** How can the graph of y = 3x + 4 be used to graph y = 3x + 2?
 - A Move the graph of the line right 2 units.
 - **B** Change the slope of the graph from 4 to 2.
 - C Change the *y*-intercept from 4 to 2.
 - **D** Move the graph of the line left 2 units.

Lesson 5-6 Geometry: Parallel and Perpendicular Lines 297

Statistics: Scatter Plots and Lines of Fit

What You'll Learn

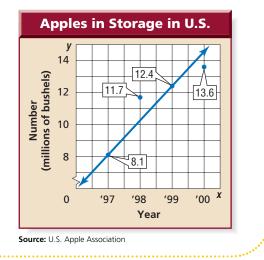

• Interpret points on a scatter plot.

• Write equations for lines of fit.

How do scatter plots help identify trends in data?

The points of a set of real-world data do not always lie on one line. But, you may be able to draw a line that seems to be close to all the points.

The line in the graph shows a linear relationship between the year x and the number of bushels of apples y. As the years increase, the number of bushels of apples also increases.

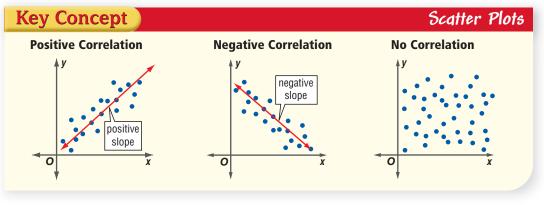

INTERPRET POINTS ON A SCATTER PLOT A scatter plot is a graph in which two sets of data are plotted as ordered pairs in a coordinate plane. Scatter plots are used to investigate a relationship between two quantities.

- In the first graph below, there is a **positive correlation** between *x* and *y*. That is, as *x* increases, *y* increases.
- In the second graph below, there is a **negative correlation** between *x* and *y*. That is, as *x* increases, *y* decreases.
- In the third graph below, there is *no correlation* between *x* and *y*. That is, *x* and *y* are not related.

CONTENTS

If the pattern in a scatter plot is linear, you can draw a line to summarize the data. This can help identify trends in the data.

Standards 3.02, 4.01

5-7

Vocabulary

- scatter plot
- positive correlation
- negative correlation
- line of fit
- best-fit line
- linear interpolation

Example 1 Analyze Scatter Plots

Determine whether each graph shows a *positive correlation*, a *negative correlation*, or *no correlation*. If there is a positive or negative correlation, describe its meaning in the situation.

a. **NUTRITION** The graph shows fat grams and Calories for selected choices at a fast-food restaurant.

The graph shows a positive correlation. As the number of fat grams increases, the number of Calories increases.

b. **CARS** The graph shows the weight

and the highway gas mileage of

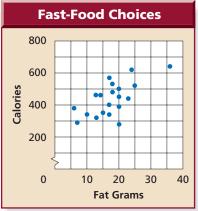

correlation. As the weight of the

The graph shows a negative

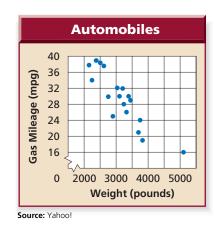

automobile increases, the gas

selected cars.

mileage decreases.

Is there a relationship between the length of a person's foot and his or her height? Make a scatter plot and then look for a pattern.

Algebra Activity

Making Predictions

• Collect the Data

- Measure your partner's foot and height in centimeters. Then trade places.
- Add the points (foot length, height) to a class scatter plot.

Analyze the Data

- **1.** Is there a correlation between foot length and height for the members of your class? If so, describe it.
- **2.** Draw a line that summarizes the data and shows how the height changes as the foot length changes.

Make a Conjecture

3. Use the line to predict the height of a person whose foot length is 25 centimeters. Explain your method.

Birds •·····

The bald eagle was listed as an endangered species in 1963, when the number of breeding pairs had dropped below 500. Source: U.S. Fish and Wildlife Service

Study Tip

Lines of Fit

When you use the graphical method, the line of fit is an approximation. So, you may draw another line of fit using other points that is equally valid. Some valid lines of fit may not contain any of the data points. **LINES OF FIT** If the data points do not all lie on a line, but are close to a line, you can draw a **line of fit**. This line describes the trend of the data. Once you have a line of fit, you can find an equation of the line.

In this lesson, you will use a graphical method to find a line of fit. In the follow-up to Lesson 5-7, you will use a graphing calculator to find a line of fit. The calculator uses a statistical method to find the line that most closely approximates the data. This line is called the **best-fit line**.

Example 2 Find a Line of Fit

BIRDS The table shows an estimate for the number of bald eagle pairs in the United States for certain years since 1985.

Years since 1985	3	5	7	9	11	14
Bald Eagle Pairs	2500	3000	3700	4500	5000	5800

Source: U.S. Fish and Wildlife Service

a. Draw a scatter plot and determine what relationship exists, if any, in the data.

Let the independent variable *x* be the number of years since 1985, and let the dependent variable *y* be the number of bald eagle pairs.

The scatter plot seems to indicate that as the number of years increases, the number of bald eagle pairs increases. There is a positive correlation between the two variables.

b. Draw a line of fit for the scatter plot.

No one line will pass through all of the data points. Draw a line that passes close to the points. A line of fit is shown in the scatter plot at the right.

c. Write the slope-intercept form of an equation for the line of fit.

The line of fit shown above passes through the data points (3, 2500) and (11, 5000).

Step 1 Find the slope.

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$
 Slope formula

$$m = \frac{5000 - 2500}{11 - 3}$$
 Let $(x_1, y_1) = (3, 2500)$ and $(x_2, y_2) = (11, 5000)$.

$$m = \frac{2500}{9}$$
 or 312.5 Simplify.

Step 2 Use m = 312.5 and either the point-slope form or the slope-intercept form to write the equation. You can use either data point. We chose (3, 2500).

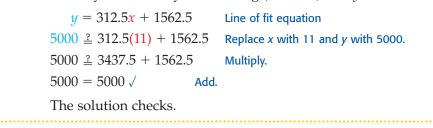

Point-slope form $y - y_1 = m(x - x_1)$ y - 2500 = 312.5(x - 5) y - 2500 = 312.5x - 937.5y = 312.5x + 1562.5 Slope-intercept form y = mx + b 2500 = 312.5(3) + b 2500 = 937.5 + b 1562.5 = by = 312.5x + 1562.5

Using either method, y = 312.5x + 1562.5.

CHECK Check your result by substituting (11, 5000) into y = 312.5x + 1562.5.

In Lesson 5-4, you learned about linear extrapolation, which is predicting values that are *outside* the range of the data. You can also use a linear equation to predict values that are *inside* the range of the data. This is called **linear interpolation**.

Example 3 Linear Interpolation

BIRDS Use the equation for the line of fit in Example 2 to estimate the number of bald eagle pairs in 1998.

Use the equation y = 312.5x + 1562.5, where *x* is the number of years since 1985 and *y* is the number of bald eagle pairs.

y = 312.5x + 1562.5	Original equation
y = 312.5(13) + 1562.5	Replace <i>x</i> with 1998 – 1985 or 13.
y = 5625	Simplify.

There were about 5625 bald eagle pairs in 1998.

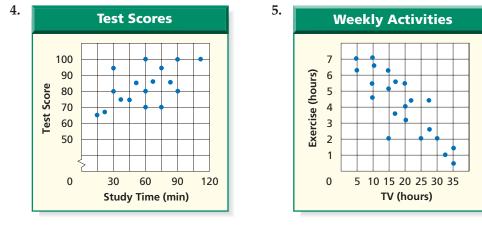

Check for Understanding

Concept Check 1. Explain how to determine whether a scatter plot has a positive or negative correlation.

- **2. OPEN ENDED** Sketch scatter plots that have each type of correlation.**a.** positive**b.** negative**c.** no correlation
- 3. Compare and contrast linear interpolation and linear extrapolation.

Guided Practice Determine whether each graph shows a *positive correlation*, a *negative correlation*, or *no correlation*. If there is a positive or negative correlation, describe its meaning in the situation.

CONTENTS

Application BIOLOGY For Exercises 6–9, use the table that shows the average body temperature in degrees Celsius of 9 insects at a given air temperature.

Temperature (°C)									
Air	25.7	30.4	28.7	31.2	31.5	26.2	30.1	31.5	18.2
Body	27.0	31.5	28.9	31.0	31.5	25.6	28.4	31.7	18.7

- **6.** Draw a scatter plot and determine what relationship exists, if any, in the data.
- 7. Draw a line of fit for the scatter plot.
- 8. Write the slope-intercept form of an equation for the line of fit.
- 9. Predict the body temperature of an insect if the air temperature is 40.2°F.

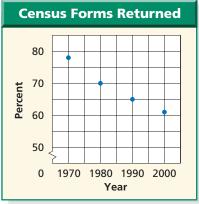

Practice and Apply

FORESTRY For Exercises 29–33, use the table that shows the number of acres burned by wildfires in Florida each year and the corresponding number of inches of spring rainfall.

Source: Florida Division of Forestry

- **29.** Draw a scatter plot with rainfall on the *x*-axis and acres on the *y*-axis.
- **30.** Draw a line of fit for the data.
- **31.** Write the slope-intercept form of an equation for the line of fit.
- **32.** In 2000, there was only 8.25 inches of spring rainfall. Estimate the number of acres burned by wildfires in 2000.
- **33.** In 1998, there was 22.2 inches of rainfall, yet 507,000 acres were burned. Where was this data graphed in the scatter plot? How did this affect the line of fit?

34. CRITICAL THINKING A test contains 20 true-false questions. Draw a scatter plot that shows the relationship between the number of correct answers *x* and the number of incorrect answers *y*.

RESEARCH For Exercises 35 and 36, choose a topic to research that you believe may be correlated, such as arm span and height. Find existing data or collect your own.

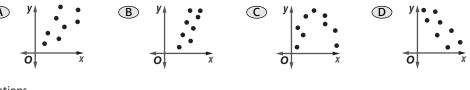

- **35.** Draw a line of fit for the data.
- **36.** Use the line to make a prediction about the data.
- **37.** WRITING IN MATH Answer the question that was posed at the beginning of the lesson.

How do scatter plots help identify trends in data?

CONTENTS

Include the following in your answer:

- a scatter plot that shows a person's height and his or her age, with a description of any trends, and
- an explanation of how you could use the scatter plot to predict a person's age given his or her height.
- **38.** Which graph is the best example of data that show a negative linear relationship between the variables *x* and *y*?

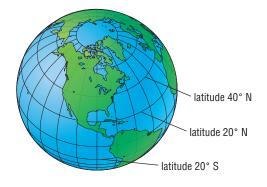

You can use a line of fit to describe the trend in winning Olympic times. Visit www.algebra1.com/ webquest to continue work on your WebQuest project.

- **39.** Choose the equation for the line that best fits the data in the table at the right.
 - (A) y = x + 4(B) y = 2x + 3(C) y = 7(D) y = 4x - 5

A Follow-Up of Lesson 5-7

Regression and Median-Fit Lines

One type of equation of best-fit you can find is a linear **regression equation**. Linear regression is sometimes called the *method of least squares*.

EARNINGS The table shows the average hourly earnings of U.S. production workers for selected years.

Year	1960	1965	1970	1975	1980	1985	1990	1995	1999
Earnings	\$2.09	2.46	3.23	4.53	6.66	8.57	10.01	11.43	13.24

Source: Bureau of Labor Statistics

Find and graph a linear regression equation. Then predict the average hourly earnings in 2010.

Step 1 Find a regression equation.

- Enter the years in L1 and the earnings in L2. **KEYSTROKES:** *Review entering a list on page* 204.
- Find the regression equation by selecting LinReg(*ax+b*) on the STAT CALC menu.
 KEYSTROKES: STAT > 4 ENTER

The equation is about y = 0.30x - 588.35.

r is the **linear correlation coefficient**. The closer the absolute value of r is to 1, the better the equation models the data. Because the r value is close to 1, the model fits the data well.

Step 3 *Predict using the regression equation.*

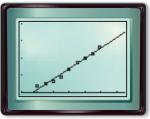

• Find y when x = 2010 using value on the CALC menu.

KEYSTROKES: 2nd [CALC] 1 2010 ENTER

According to the regression equation, the average hourly earnings in 2010 will be about \$15.97.

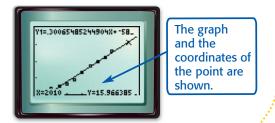

Step 2 Graph the regression equation.

- Use STAT PLOT to graph the scatter plot. **KEYSTROKES:** *Review statistical plots on page 204.*
- Copy the equation to the Y= list and graph. **KEYSTROKES:** Y= VARS 5 ► 1 GRAPH

[1950, 2020] scl: 10 by [0, 20] scl: 5

The *residual* is the difference between actual and predicted data. The predicted earnings in 1970 using this model were \$3.94. (To calculate, press **2nd [CALC]** 1 1970 **ENTER**.) So the residual for 1970 was \$3.94 – \$3.23 or \$0.71.

www.algebra1.com/other_calculator_keystrokes

CONTENTS

Investigation

A second type of best-fit line that can be found using a graphing calculator is a **median-fit line**. The equation of a median-fit line is calculated using the medians of the coordinates of the data points.

Find and graph a median-fit equation for the data on hourly earnings. Then predict the average hourly earnings in 2010. Compare this prediction to the one made using the regression equation.

Step 1 Find a median-fit equation.

• The data are already in Lists 1 and 2. Find the median-fit equation by using Med-Med on the STAT CALC menu.

KEYSTROKES: STAT > 3 ENTER

The median-fit equation is y = 0.299x - 585.17.

Step 3Predict using the median-fit equation.KEYSTROKES:2nd[CALC] 1 2010ENTER

According to the median-fit equation, the average hourly earnings in 2010 will be about \$15.82. This is slightly less than the predicted value found using the regression equation.

Exercises

Refer to the data on bald eagles in Example 2 on pages 300 and 301.

- 1. Find regression and median-fit equations for the data.
- **2.** What is the correlation coefficient of the regression equation? What does it tell you about the data?
- **3.** Use the regression and median-fit equations to predict the number of bald eagle pairs in 1998. Compare these to the number found in Example 3 on page 301.

For Exercises 4 and 5, use the table that shows the number of votes cast for the Democratic presidential candidate in selected North Carolina counties in the 1996 and 2000 elections.

- **4.** Find regression and median-fit equations for the data.
- **5.** In 1996, New Hanover County had 22,839 votes for the Democratic candidate. Use the regression and median-fit equations to estimate the number of votes for the Democratic candidate in that county in 2000. How do the predictions compare to the actual number of 29,292?

Step 2 Graph the median-fit equation.

• Copy the equation to the Y= list and graph. **KEYSTROKES:** Y= CLEAR VARS 5 ▶ 1

Study Guide and Review

Vocabulary and Concept Check

best-fit line (p. 300) constant of variation (p. 264) direct variation (p. 264) family of graphs (p. 265) linear extrapolation (p. 283) linear interpolation (p. 301) line of fit (p. 300) negative correlation (p. 298) parallel lines (p. 292) parent graph (p. 265) perpendicular lines (p. 293) point-slope form (p. 286) positive correlation (p. 298) rate of change (p. 258) scatter plot (p. 298) slope (p. 256) slope-intercept form (p. 272)

Exercises Choose the correct term to complete each sentence.

- **1.** An equation of the form y = kx, where $k \neq 0$, describes a (*direct variation*, *linear extrapolation*).
- **2.** The ratio of (*rise*, *run*), or vertical change, to the (*rise*, *run*), or horizontal change, as you move from one point on a line to another, is the slope of a nonvertical line.
- **3.** The lines with equations y = -2x + 7 and y = -2x 6 are (*parallel*, *perpendicular*) lines.
- **4.** The equation y 2 = -3(x 1) is written in (*point-slope*, *slope-intercept*) form.
- 5. The equation $y = -\frac{1}{3}x + 6$ is written in (*slope-intercept*, *standard*) form.
- 6. The (*x*-intercept, *y*-intercept) of the equation -x 4y = 2 is $-\frac{1}{2}$.

_

Lesson-by-Lesson Review

1 Slope

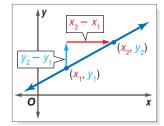

See pages 256–262. Concept Summary

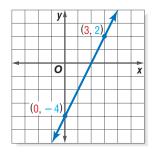

- The slope of a nonvertical line is the ratio of the rise to the run.
- $m = \frac{y_2 y_1}{x_2 x_1}$

Example

Determine the slope of the line that passes through (0, -4) and (3, 2).

Let
$$(0, -4) = (x_1, y_1)$$
 and $(3, 2) = (x_2, y_2)$.
 $m = \frac{y_2 - y_1}{x_2 - x_1}$ Slope formula
 $m = \frac{2 - (-4)}{3 - 0}$ $x_1 = 0, x_2 = 3, y_1 = -4, y_2 = 2$
 $m = \frac{6}{3}$ or 2 Simplify.

Exercises Find the slope of the line that passes through each pair of points. *See Examples 1–4 on page 257.*

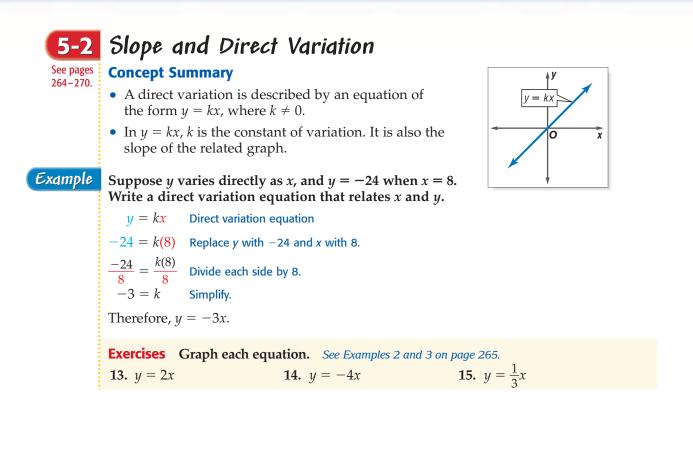

7. (1, 3), (-2, -6)**8.** (0, 5), (6, 2)**9.** (-6, 4), (-6, -2)**10.** (8, -3), (-2, -3)**11.** (2.9, 4.7), (0.5, 1.1)**12.** $\left(\frac{1}{2}, 1\right), \left(-1, \frac{2}{3}\right)$

Chapter 5 Study Guide and Review 309

 Exercises
 Write an equation of the line with the given slope and y-intercept.

 See Examples 1 and 2 on pages 272 and 273.

 25. slope: 3, y-intercept: 2
 26. slope: 1, y-intercept: -3

 27. slope: 0, y-intercept: 4
 28. slope: $\frac{1}{3}$, y-intercept: 2

 29. slope: 0.5, y-intercept: -0.3
 30. slope: -1.3, y-intercept: 0.4

 Graph each equation. See Examples 3 and 4 on pages 273 and 274.

 31. y = 2x + 1 32. y = -x + 5 33. $y = \frac{1}{2}x + 3$

 34. $y = -\frac{4}{3}x - 1$ 35. 5x - 3y = -3 36. 6x + 2y = 9

280-285.

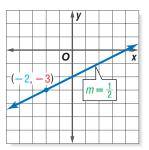

Writing Equations in Slope-Intercept Form Concept Summary

- To write an equation given the slope and one point, substitute the values of *m*, *x*, and *y* into the slope-intercept form and solve for *b*. Then, write the slope-intercept form using the values of *m* and *b*.
- To write an equation given two points, find the slope. Then follow the steps above.

Example

Write an equation of a line that passes through

(-2, -3) with slope $\frac{1}{2}$. y = mx + b Slope-intercept form $-3 = \frac{1}{2}(-2) + b$ Replace m with $\frac{1}{2}$, y with -3, and x with -2. -3 = -1 + b Multiply. -3 + 1 = -1 + b + 1 Add 1 to each side. -2 = b Simplify. Therefore, the equation is $y = \frac{1}{2}x - 2$.

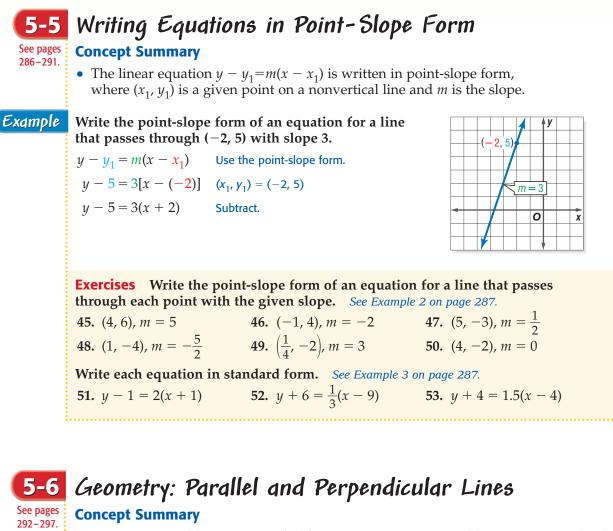

Exercises Write an equation of the line that satisfies each condition. *See Examples 1 and 2 on pages 280 and 281.*

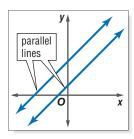

- **37.** passes through (-3, 3) with slope 1
- **39.** passes through (1, 6) with slope $\frac{1}{2}$
- **41.** passes through (-4, 2) and (1, 12)
- **43.** passes through (8, -1) with slope 0

- **38.** passes through (0, 6) with slope -2
- **40.** passes through (4, -3) with slope $-\frac{3}{5}$
- **42.** passes through (5, 0) and (4, 5)
- **44.** passes through (4, 6) and has slope 0

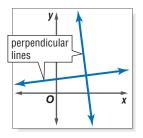

• Two nonvertical lines are parallel if they have the same slope.

• Two nonvertical lines are perpendicular if the product of their slopes is -1.

Example

Write the slope-intercept form for an equation of the line that passes through (5, -2) and is parallel to y = 2x + 7.

CONTENTS

The line parallel to y = 2x + 7 has the same slope, 2.

 $y - y_1 = m(x - x_1)$ Point-slope form

y - (-2) = 2(x - 5) Replace *m* with 2, *y* with -2, and *x* with 5.

y + 2 = 2x - 10 Simplify.

y = 2x - 12 Subtract 2 from each side.

Exercises Write the slope-intercept form for an equation of the line parallel to the graph of the given equation and passing through the given point. *See Example 1 on page 292.*

54. $y = 3x - 2$, (4, 6)	55. $y = -2x + 4$, (6, -6)	56. $y = -6x - 1$, (1, 2)
57. $y = \frac{5}{12}x + 2$, (0, 4)	58. $4x - y = 7$, (2, -1)	59. $3x + 9y = 1$, (3, 0)

Write the slope-intercept form for an equation of the line perpendicular to the graph of the given equation and passing through the given point. *See Example 3 on page 294.*

60. y = 4x + 2, (1, 3)**61.** y = -2x - 7, (0, -3)**62.** y = 0.4x + 1, (2, -5)**63.** 2x - 7y = 1, (-4, 0)**64.** 8x - 3y = 7, (4, 5)**65.** 5y = -x + 1, (2, -5)

5-7 See pages

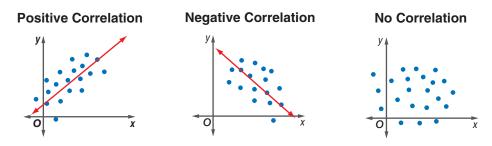

298-305.

Concept Summary

• If *y* increases as *x* increases, then there is a positive correlation between *x* and *y*.

Statistics: Scatter Plots and Lines of Fit

- If *y* decreases as *x* increases, then there is a negative correlation between *x* and *y*.
- If there is no relationship between *x* and *y*, then there is no correlation between *x* and *y*.
- A line of fit describes the trend of the data.
- You can use the equation of a line of fit to make predictions about the data.

Exercises For Exercises 66–70, use the table that shows the length and weight of several humpback whales. *See Examples 2 and 3 on pages 300 and 301.*

Length (ft)	40	42	45	46	50	52	55
Weight (long tons)	25	29	34	35	43	45	51

66. Draw a scatter plot with length on the *x*-axis and weight on the *y*-axis.

67. Draw a line of fit for the data.

- 68. Write the slope-intercept form of an equation for the line of fit.
- **69.** Predict the weight of a 48-foot humpback whale.
- **70.** Most newborn humpback whales are about 12 feet in length. Use the equation of the line of fit to predict the weight of a newborn humpback whale. Do you think your prediction is accurate? Explain.

Vocabulary and Concepts

- 1. Explain why the equation of a vertical line cannot be in slope-intercept form.
- 2. Draw a scatter plot that shows a positive correlation.
- **3.** Name the part of the slope-intercept form that represents the rate of change.

Skills and Applications

Find the slope of the line that passes through each pair of points.

- 4. (5, 8), (-3, 7)5. (5, -2), (3, -2)**6.** (6, −3), (6, 4)
- 7. **BUSINESS** A web design company advertises that it will design and maintain a website for your business for \$9.95 per month. Write a direct variation equation to find the total cost *C* for any number of months *m*.

Graph each equation.

- 8. y = 3x 19. y = 2x + 310. 2x + 3y = 9
- **11. WEATHER** The temperature is 16°F at midnight and is expected to fall 2° each hour during the night. Write the slope-intercept form of an equation to find the temperature *T* for any hour *h* after midnight.

Suppose *y* varies directly as *x*. Write a direct variation equation that relates x and y.

12. y = 6 when x = 9**13.** y = -12 when x = 414. y = -8 when x = 8

CONTENTS

Write the slope-intercept form of an equation of the line that satisfies each condition.

- **15.** has slope -4 and *y*-intercept 3
- **16.** passes through (-2, -5) and (8, -3)**18.** a horizontal line passing through (5, -8)
- **17.** parallel to 3x + 7y = 4 and passes through (5, -2)
- **19.** perpendicular to the graph of 5x 3y = 9 and passes through the origin
- **20.** Write the point-slope form of an equation for a line that passes through (-4, 3)with slope -2.

ANIMALS For Exercises 21–24, use the table that shows the relationship between dog years and human years.

- 21. Draw a scatter plot and determine what relationship, if any, exists in the data.
- Dog 1 2 3 4 5 6 7 Years Human 47 15 24 28 32 37 42 Years

- **22.** Draw a line of fit for the scatter plot.
- **23.** Write the slope-intercept form of an equation for the line of fit.
- **24.** Determine how many human years are comparable to 13 dog years.

25. STANDARDIZED TEST PRACTICE A line passes through (0, 4) and (3, 0). Which equation does *not* represent the equation of this line? Practice

(A)
$$y - 4 = -\frac{4}{3}(x - 0)$$

(B) $y = -\frac{4}{3}x + 3$
(D) $y - 0 = -\frac{4}{2}(x - 3)$
(E) $4x + 3y = 12$

\bigcirc	$\frac{x}{3}$	+	$\frac{y}{4}$	=	1

D $y - 0 = -\frac{1}{3}(x - 3)$
